SUMMARY

Third-year B.Tech student in Artificial Intelligence & Data Science (CGPA 8.91) with a remote data internship (PySpark, Databricks), two faculty-guided machine learning research projects on public datasets of 67,000 to 116,000 rows, and three deployed full-stack AI apps. I clean messy real-world data, build and evaluate models carefully, and explain results in plain language. Used to working independently and remotely.

EXPERIENCE

Data/AI Intern, TaskLanceAI (Remote) Aug 2026 – Sep 2026

- Standardized inconsistent city names in e-commerce order records using normalization, reference mappings and fuzzy matching in PySpark.
- Worked across raw, cleaned and final data layers (Bronze, Silver, Gold) in Databricks to keep records consistent and traceable.

Data Collection & Cleaning (Freelance), Family Business, Ayurvedic Publishing 2025

- Collected 3,000+ records of practicing Ayurvedic (BAMS) doctors and students from public web sources; cleaned them in Excel by removing duplicates, standardizing names, numbers and locations, and flagging incomplete entries.
- Loaded the final list into Google Contacts for repeated WhatsApp outreach campaigns, improving accuracy and turnaround each cycle.

RESEARCH PROJECTS (FACULTY GUIDED, KJSIT)

Diabetes Classification, 2022 Canadian Community Health Survey · Prof. Nisha Vanjari · Python, pandas, scikit-learn · 2026
[GitHub](#)

- Prepared 67,079 responses across 255 variables, handling the survey's special answer codes, and built predictor sets from a literature review.
- Compared Logistic Regression, Random Forest and Gradient Boosting with 5-fold cross-validation and a holdout split. Better predictors raised ROC-AUC from 0.774 to 0.827, while the three models were within 0.008 F1 of each other.

Predicting Toronto Restaurant Inspection Results (DineSafe) · Prof. Nisha Vanjari · CatBoost, SHAP · [GitHub](#) 2026

- Rebuilt 115,899 raw rows into 77,475 inspections linked from 2001 to 2023, using only information available before each inspection.
- One year of history raised PR-AUC from 0.127 to 0.162; the top 10% of model-flagged inspections held 28% of all non-pass results. Checked calibration and reported it as a risk-ranking tool.

Drought Vulnerability Index for Indian Districts · Minor project, Prof. Pankaj Deshmukh · Python 2026 (ongoing)

- Combined rainfall, El Niño (NOAA ONI) and Census data for a five-district Maharashtra prototype; ran correlation analysis, PCA and clustering.

AI & FULL-STACK PROJECTS (built with AI-assisted tools: Cursor, Claude, Lovable)

TruthLens AI, Deepfake Image Detector · React, Node/Express, FastAPI, MongoDB, HuggingFace ViT, Gemini · [GitHub](#)

- Multi-service pipeline (React to Node API to Python FastAPI to MongoDB) with a three-layer detection cascade, Gemini-generated explanations and HIGH/MEDIUM/LOW risk scoring.

HelpIndia, NGO Volunteer & Donation Platform · React, TypeScript, Supabase (PostgreSQL) · [GitHub](#)

- Designed the relational schema from scratch, wrote SQL views for dashboard statistics, and added row-level security for per-user data isolation.

VitaMind, AI Health & Nutrition Tracker · React, TypeScript, Supabase, Recharts · [GitHub](#)

- Built nutrition-trend dashboards over custom date ranges and calendar history with streak and trend calculations.

SKILLS

Data & ML: Python (pandas, NumPy, scikit-learn, CatBoost, SHAP), SQL (PostgreSQL, MySQL), PySpark, Databricks, TensorFlow, OpenCV, model evaluation (cross-validation, ROC/PR-AUC, calibration)

Tools: Excel (pivot tables, VLOOKUP, data validation), Google Sheets, Streamlit, Plotly, Recharts, Git/GitHub, Linux

Engineering & AI: FastAPI, Node/Express, React, TypeScript, Supabase, MongoDB, HuggingFace, Gemini API, Cursor, Claude

Languages: English (fluent), Hindi (fluent), Marathi (native)

EDUCATION

B.Tech, Artificial Intelligence & Data Science, K. J. Somaiya Institute of Technology, Sion, Mumbai · CGPA 8.91 2024 – 2028

Coursework: DBMS, DAA, AI & ML Fundamentals, Data Science, Python, OOP · HSC 82.0% (2024) · SSC 94.6% (2022)

ACHIEVEMENTS & ACTIVITIES

- Winner, KJSIT Campus Hackathon 2025 · AWS Educate: Introduction to Generative AI and Machine Learning Foundations (Jul 2026)
- Trainer, AI Robotics Cell, KJSIT: taught Arduino to 21 school students over a two-day workshop, rated 4.52/5 (Aug 2026)
- Organising team, KnowCode 3.0 hackathon (1,200+ registrations), S4DS KJSIT; Public Relations Officer, Nakshatra committee (letters of appreciation)
